

RISK ADVISORY PHILMONT SCOUT RANCH

Parents, guardians and potential participants in Philmont programs are advised that journeying to and from Philmont, and one's stay at Philmont, can involve exposure to accident, illness, and/or injury associated with high elevation, physically demanding, high adventure program in a remote mountainous area. Campers may be exposed to occasional severe weather conditions such as lightning, hail, flash floods and heat. Other accidental possibilities include injuries from tripping and falling, motor vehicle accidents, asthma and diabetes related incidents, heart attacks, heat exhaustion and falls from horses.

Philmont's trails are steep and rocky. Wild animals such as bears, rattlesnakes and mountain lions are native and usually present little danger if proper precautions are taken. Please refer to the *Guidebook to Adventure*, speak with previous Philmont participants, or call Philmont for further information concerning risks and measures which can be taken to avoid accidents.

Philmont's staff is trained in preventing accidents, first aid and CPR and is prepared to assist in recognizing, reacting, and responding to accidents, injuries, and illnesses. **Medical and search and rescue services are provided by Philmont in response to an accident or emergency, however, response times can be affected by location, weather, or other emergencies and could be delayed 6 or more hours.**

RECOMMENDATIONS REGARDING CHRONIC ILLNESSES

Philmont requires that this information be shared with the parent(s) or guardian(s) and examining physician of every participant. Philmont does not have facilities for extended care or treatment, therefore, participants who cannot meet these requirements will be sent home at their expense.

CARDIAC OR CARDIOVASCULAR DISEASE

Adults or youth who have had any of the following should undergo a thorough evaluation by a physician before considering participation at Philmont.

1. Angina (chest pain caused by heart or coronary artery disease)
2. Myocardial infarction (heart attack)
3. Surgery or angioplasty to treat coronary artery disease; surgery or treat congenital heart disease or other heart surgery
4. Stroke or transient ischemic attacks
5. Claudication (leg pain with exercise caused by hardening of the arteries)
6. Family history of heart disease or a family member who died unexpectedly before age 50
7. Excessive weight
8. Smoking

The altitude at Philmont and the physical exertion involved may precipitate either a heart attack or stroke in susceptible persons. Participants with a history of any of the first six (6) conditions listed above should have a physician supervised stress test. A thallium stress test is recommended for participants who have coronary heart disease. **Even if the stress test is normal, the results of testing done at lower elevations and without the backpacks carried at Philmont do not guarantee safety.** If the test results are abnormal, the individual is advised not to participate.

HYPERTENSION (HIGH BLOOD PRESSURE)

The combination of stress and altitude appears to cause significant increase in blood pressure in some individuals attending Philmont. Occasionally hypertension reaches such a level that it is no longer safe to engage in strenuous activity. Hypertension can increase the risk of having a stroke, developing altitude sickness, or angina. Persons coming to Philmont should have a normal blood pressure (less than 135/85). Persons with significant hypertension (greater than 150/95) should be treated before coming to Philmont, and should continue on medications while at Philmont. The goal of treatment should be to lower the blood pressure to normal. Persons with mild hypertension (greater than 135/85 but less than 150/95) probably require treatment as well. It is the experience of the Philmont medical staff that such individuals often develop significant hypertension when they arrive at Philmont. Participants already on antihypertensive therapy with normal blood pressures should continue on the medications. Diuretic therapy to control hypertension is not recommended because of the risks of dehydration which exist with strenuous activity at high altitude and low humidity. Each participant who is 18 years of age or older will have his or her blood pressure checked at Philmont. Those individuals with a blood pressure consistently greater than 150/95 probably will be kept off the trail until the blood pressure decreases.

INSULIN DEPENDENT DIABETES MELLITUS

Exercise and the type of food eaten affect insulin requirements. Any individual with insulin-dependent diabetes mellitus should be able to monitor personal blood glucose and to know how to adjust insulin doses based on these factors. The diabetic person also should know how to give a self injection. Both the diabetic person and one other person in the group should be able to recognize indications of excessively high blood sugar (Hyperglycemia or diabetic ketoacidosis) and to recognize indications of excessively low blood sugar (hypoglycemia). The diabetic person and one other individual should know the appropriate initial responses for these conditions. It is recommended that the diabetic person and one other individual carry insulin on the trek (in case of accident) and that a third vial be kept at the Health Lodge for backup. Insulin can be carried in a small thermos which can be resupplied with ice or cold water at most staffed camps.

A diabetic person who has had frequent hospitalizations for diabetic ketoacidosis or who has had frequent problems with hypoglycemia should not participate in a trek at Philmont until better control of the diabetes has been achieved. Call Philmont at 505-376-2281 to obtain permission from the chief medical officer for individuals hospitalized within the past year.

EXCESSIVE BODY WEIGHT

Any youth or advisor who exceed the maximum weight limits on the Philmont weight chart is at extreme risk for health problems.

SEIZURES (EPILEPSY)

A seizure disorder or epilepsy does not exclude an individual from participating at Philmont. However, the seizure disorder should be well controlled by medications. A minimum one year seizure-free period is considered to be adequate control. Exceptions to this guideline may be considered by Philmont's chief medical officer and will be based on the specific type of seizure and the likely risks to the individual and to other members of the crew. The medical staff at the Health Lodge may place some restrictions on activities (rock-climbing, horse riding, etc.) for those individuals who are approved for participation but whose seizures are incompletely controlled.

PHILMONT WEIGHT LIMITS FOR BACKPACKING & HIKING

Each participant in a Philmont trek must not exceed the maximum acceptable limit in the weight for height chart shown below. The right hand column shows the maximum acceptable weight for a person's height in order to participate in a Philmont trek. Those who fall within the limits are more likely to have an enjoyable trek and avoid incurring health risks. Every Philmont trek involves hiking with a 3505- lb. Backpack between 6,500 and 12,500 ft. elevations. Philmont recommends that participants carry a pack weighing no more than 25-30% of their body weight.

Participants 21 years and older who exceed the maximum acceptable weight limit for their height at the Philmont medical recheck, **will not** be permitted to backpack or hike in Philmont. For example, a person 5'10" cannot weigh more than 226 lbs. * The Philmont physicians will use their best professional judgement in determining participation in a Philmont trek by individuals under 21 years of age who exceed the maximum acceptable weight for height. Participants under 21 years of age are strongly encouraged to meet the weight limit for their height, and exceptions are not made automatically. Discussion in advance with Philmont regarding any exception to the weight limit for persons under 21 years of age is required.

The maximum acceptable weight for individuals of any age 6'7" or taller is 295 lbs. This limit is necessary due to limitations of rescue equipment and for the safety of Philmont personnel. The maximum weight for any participant in a Cavalcade Trek and for horserides is 200 lbs.

| HEIGHT | RECOMMENDED WEIGHT (lbs.) | MAXIMUM ACCEPTANCE |
|----------------|----------------------------------|---------------------------|
| 5'0" | 97 -138 | 166 |
| 5'1" | 101-143 | 172 |
| 5'2" | 104-148 | 178 |
| 5'3" | 107-152 | 183 |
| 5'4" | 111-157 | 189 |
| 5'5" | 114-162 | 195 |
| 5'6" | 118-167 | 201 |
| 5'7" | 121-172 | 207 |
| 5'8" | 125-178 | 214 |
| 5'9" | 129-185 | 220 |
| 5'10" | 132-188 | 226 |
| 5'11" | 136-194 | 233 |
| 6'0" | 140-199 | 239 |
| 6'1" | 144-205 | 246 |
| 6'2" | 148-210 | 252 |
| 6'3" | 152-216 | 260 |
| 6'4" | 156-222 | 267 |
| 6'5" | 160-228 | 274 |
| 6'6" | 164-234 | 281 |
| 6'7" & over | 170-240 | 295 |
